PROFESSIONAL SUMMARY

MS Computer Science candidate at Northeastern University (GPA: 4.0) with 5 years of experience in Java, Spring Boot, microservices, and AWS; reduced API latency by 35% across 1M+ daily requests. Seeking software engineering internship to apply expertise in event-driven architecture, cloud integration, and performance optimization.

EDUCATION

Master of Science, Computer Science

Northeastern University, Boston, MA

GPA: 4.0

Expected: May 2027

Coursework: Computer Systems, Database Management Systems, Programming Design Paradigm

Bachelor of Technology, Information Technology

Banasthali Vidyapith, Rajasthan, India

May 2019

TECHNICAL SKILLS

Languages: Java, Python, C++, Rust, JavaScript, Node.js, SQL, R, Shell Scripting

Backend & Frameworks: Spring Boot, Spring Data JPA, Hibernate, Microservices, RESTful APIs, Maven, Gradle

Databases: PostgreSQL, MySQL, MongoDB, Redis, Oracle

Cloud & DevOps: AWS (S3, EC2, Lambda, RDS, SQS, SNS), Docker, Kubernetes, CI/CD, Git, Linux

Tools & Messaging: Apache Kafka, RabbitMQ, Swagger/OpenAPI, JUnit, Mockito, TestNG

Concepts: Object-Oriented Programming, Multithreading, Event-Driven Architecture, System Design, API Development, Performance Optimization, Agile/Scrum, TDD

PROJECTS

Adaptive Concurrent Web Server | Rust, Systems Programming

March 2026

- Engineered multi-threaded web server in Rust with adaptive worker pool scaling thread count under real-time load; reduced P99 tail latency from 1.73ms baseline to under 1.04ms (40% reduction) at 31,725 req/s throughput

Streaming Analytics Data Warehouse | R, SQL, MySQL, SQLite

December 2025

- Designed year-partitioned star schema in cloud-hosted MySQL and built Dockerized R-based ETL pipeline to process 98K+ streaming transaction records, enabling viewership trend analysis across 3+ years of data

EXPERIENCE

Senior Software Engineer, NAB Global Innovation Center India

February 2023 – July 2025

- Optimized 20+ RESTful APIs processing 1M+ daily requests, slashing latency by 35% through database indexing, Redis caching, and OAuth 2.0/JWT authentication; received STAR Award for technical excellence
- Spearheaded 4-month Java 8 to Java 17 migration of 20 customer-facing banking microservices, resolving critical CVEs, replacing deprecated Spring Security imports, and enforcing updated authentication protocols across distributed systems
- Prototyped dashboard automating deployment tracking for 20+ teams, increasing monitoring visibility by 80% and eliminating manual status reporting; earned SPOT Award for innovation
- Coached 5 junior engineers on microservices architecture and TDD, accelerating team velocity by 15% while sustaining 92% code coverage

Software Engineer, IBM India

April 2021 – December 2022

- Architected event-driven microservices solution using PostgreSQL and Groovy with Circuit Breaker and Saga patterns, eliminating cascading failures and improving system performance by 45%
- Delivered automated CI/CD pipelines using Jenkins and Docker, cutting release cycle time by 40% across 10+ microservices
- Launched full-stack feature using React and Spring Boot that drove a 40% increase in daily active users and average session time across the client portal

Software Engineer, Capgemini Engineering

January 2019 – March 2021

- Resolved performance bottlenecks across 14 microservices for enterprise clients including Samsung and Hughes.net, reducing system response time by 25%; received Team Excellence Award
- Optimized SQL queries for RESTful services backed by H2 database, reducing data retrieval time by 30%; achieved 98% code coverage using TestNG and Mockito
