

SRASHTI GUPTA

Boston, MA | 857-381-6346 | sg.srashtigupta@gmail.com | linkedin.com/in/srashti-gupta | github.com/srashtigupta-25 | Portfolio

Summary

Software engineer with 5+ years building Java/Spring Boot microservices, distributed banking and financial systems, AWS platforms, and full-stack products at NAB, IBM, and Capgemini Engineering. MS Computer Science candidate building production AI systems with Python, LangChain, LangGraph, and multi-agent workflows.

Education

Master of Science, Computer Science

Northeastern University, Boston, USA

GPA: 4.0

Expected May 2027

Bachelor of Technology, Information Technology

Banasthali Vidyapith, Rajasthan, India

GPA: 3.7

May 2019

Technical Skills

Languages: Java, Python, JavaScript, TypeScript, C++, Rust, SQL, R, Shell Scripting

AI & Machine Learning: LangChain, LangGraph, LLM APIs, AWS Bedrock, Claude, Groq, multi-agent orchestration, prompt engineering

Frontend & Backend: React, Next.js, Redux, HTML/CSS, Spring Boot, Spring Data JPA, Hibernate, FastAPI, REST APIs, Microservices, Node.js

Cloud & Data: AWS (Lambda, Step Functions, S3, SQS, SNS, CloudFront, API Gateway, Cognito, EC2, RDS), MySQL, PostgreSQL, DynamoDB, MongoDB, Redis, Oracle

DevOps & Engineering: Git, Docker, Kubernetes, Kafka, CI/CD, Jenkins, Maven, Gradle, JUnit, Mockito, TestNG, pytest, TDD, Agile/Scrum, Jira

Experience

Senior Software Engineer | NAB Global Innovation Center, Gurgaon, India

February 2023 - July 2025

- Designed and optimized 20+ **Java** banking APIs processing 1M+ daily transactions on **AWS and Kubernetes**; implemented OAuth 2.0/JWT, Redis caching, and database indexing, reducing latency from 180 ms to 117 ms (35%) and earning a STAR Award.
- Led a four-month migration of 20 banking microservices from Java 8 to Java 17, resolving eight security vulnerabilities and integrating **Kafka** at 10K messages/second with MongoDB while maintaining zero-downtime deployment.
- Developed a React and REST API deployment-tracking tool for 20+ engineering teams with PostgreSQL, increasing monitoring visibility from 23% to 98%; earned a SPOT Award for innovation.

Software Engineer | IBM, Gurgaon, India

April 2021 - December 2022

- Architected financial microservices with Spring Data JPA, Hibernate, PostgreSQL, and Circuit Breaker patterns, improving response time from 420 ms to 231 ms (45%).
- Built Docker containers and 12-stage Jenkins CI/CD pipelines across 10+ services, reducing deployment time from 65 to 39 minutes (40%) and standardizing REST API documentation with Swagger/OpenAPI.
- Developed a **React and Spring Boot** feature with cross-functional teams, increasing daily active users from 12.3K to 17.2K (40%).

Software Engineer | Capgemini Engineering, Gurgaon, India

January 2019 - March 2021

- Built backend and data-layer components for Samsung and HughesNet using Java, IBM DB2, MySQL, and connection pooling; optimized indexed SQL queries from 840 ms to 588 ms (30%).
- Developed REST APIs for HughesNet and resolved bottlenecks across 14 services, reducing response time from 520 ms to 390 ms (25%); maintained 98% test coverage with TestNG and Mockito and earned a Team Excellence Award.

Projects

Alpha Sign - Multi-Agent Financial Intelligence

June 2026

Python, LangChain, LangGraph, Next.js, TypeScript | Live Demo | Team Repository | My Commits

- Owned the Narrative/News Agent and co-developed the **Python and LangChain/LangGraph** agent layer with a teammate, adding ticker-aware research, source-quality checks, multi-ticker support, tool-calling safeguards, and live Server-Sent Events streaming.
- Contributed to a modular **Next.js and TypeScript** dashboard with reusable components, responsive layouts, ARIA-labeled controls, visible keyboard focus states, reduced-motion support, and interactive financial charts.

Autopsy Lab - AI Incident Reconstruction

June 2026

Python, FastAPI, Groq, Next.js, TypeScript | Live Demo | GitHub

- Built a four-hour Madison AI Hackathon prototype that converts system logs into evidence-backed incident timelines, root-cause analysis, and remediation plans; hardened it with **Python and FastAPI**, Pydantic-validated LLM output, secure in-memory file parsing, responsive UI, pytest/Playwright tests, CI/CD, and Vercel deployment.

Sage - AI Research Synthesizer

May 2026

Java, React, AWS Bedrock, Lambda, Step Functions | Live Demo | GitHub

- Built a serverless GenAI platform using **Java**, **AWS Bedrock**, and a five-state **Step Functions** pipeline that runs three parallel, Tavily-grounded research paths and returns Claude reports in under 45 seconds; added DynamoDB, Cognito JWT authentication, CloudFront, and PDF export.

Adaptive Concurrent Web Server

March 2026

Rust, Python, Systems Programming | Team Repository | Case Study

- Engineered a multithreaded **Rust** server with an adaptive 4–16 worker pool and lock-free MPSC channel, reducing P99 latency from 1.73 ms to 1.04 ms (40%) at 31,725 requests/second.
